3 次の英文はルームメイトを探しているMaria (マリア) が、同じくルームメイトを探しているKate (ケイト) を部屋に迎える場面である。これを読んで、後の各問に答えよ。

Maria : Hi...Kate. I'm Maria.

Kate : Nice to meet you. I'm Kate.

Maria : Come in ... take a look around.

Kate : Wow, this place is really nice! Big, and bright...and so clean!

Maria : Yeah, I'm [あ] a neatnik.

Kate : Oh, I know what you mean. I always keep my room clean, too.

Maria : Really?

Kate : Yeah, I don't like it when people leave their stuff all over the place or leave dirty dishes in the kitchen.

Maria : That's great to hear! So, have a seat. A?

Kate : Oh, no thanks. I'm not thirsty. I stopped for coffee on the way here. So, how long have you been looking for a new roommate?

Maria : Oh, for a couple of weeks. I've talked to about five people, but I couldn't ① (person / who / with / find / live / right / to / the). So, I heard you're new to the city, aren't you?

Kate : Yeah, I lost my job a few months ago. I couldn't find a new job in my city, so I decided to take a new job in a different city. At first, losing my job was one ② (than / challenges / my / biggest / life / in / of / the), but I understood this would be the best time to change my life.

Maria : Well, that's great! So, did you live with roommates before, or your parents, or...

Kate : Yeah, I lived with a couple of roommates. But I couldn't live with Susan, the last roommate of mine, because...I'm really neat. She was a really nice person, but she was very messy. And she was noisy... you know, she was always watching TV and talking on the phone and having her friends over!

Maria : Oh, no! I don't like [い] messy people, either. So, it sounds like we're the perfect match!

Kate : Yeah! I think I can be your good partner.

Maria : When can you move in?

<several days later>

Maria : OK, so Tom, you're not going to believe this...

Tom : What happened?

Maria : Kate was a liar. Yesterday when I just got home, I found her stuff left all over the room! [ア] She said she was really neat, but she wasn't. She didn't clean her room at all!

Tom : Wow. Oh, no ...

(注)

stuff: 持ち物 a couple of: 2, 3の noisy: 騒がしい have~over: ~を家に招く

- 4 次の英文は、aurora（オーロラ）について書かれたものである。これを読んで、後の各問に答えよ。解答は答の欄に記入せよ。

On the night of 2 September 1859, the dark sky over Europe and North America was suddenly full of light. The light did not come from the sun or the moon --- and it had a strange color. The light moved across the sky, coming and going, like clouds in a strong wind. In the United States, a man in Boston was using the telegraph to speak to a man in Portland, 160 kilometers away. They both turned off the electricity for the telegraph, but they could still speak to each other for the next two hours. The electricity was coming from the light in the sky. How was this possible? And what was this light in the sky?

The light is called the aurora. Usually you can see it only at the very north or at the very south of the earth. But in 1859, something happened in the sun --- a very large storm --- and it moved the aurora across the middle of the earth. We do not think that this ever happened before 1859, and we know that it has not happened since then.

The light of the aurora does not come every night. It can be made because of storms 150 million kilometers away, in the sun. And the best times to see the light of the aurora are around the equinoxes, in March and September. Most often, the aurora is green, but it can be blue, or red, or any color between. Sometimes the light is still, like the lights of a town far away; sometimes the light moves, dancing in the sky.

But why does the aurora happen? And why can we only see at the top or bottom of the earth? The aurora is made by something called the 'solar wind'. We can't see this wind, or touch it. It is a wind of particles that come from the sun all the time at about 400 kilometers a second.

Most of the particles never touch the earth. The earth has a kind of 'wall' around it to keep these particles away. This wall is called the earth's magnetic field, and it pushes the particles away on either side. It is like water going to each side of a large stone in a river. But the earth's magnetic field has two 'windows' at its very north and very south. From these windows, the solar particles come into the earth. These solar particles crash into the particles that are already in our sky. And when this happens, we see the beautiful lines or clouds of light of the aurora.

Where can you see the aurora? Alaska is a good place to see the aurora, and you can also go to places like Iceland, Siberia, Greenland, Norway, and Sweden. Australia, Tasmania, or New Zealand are good places, too.
